Figure 1

Specify the following queries on the COMPANY relational database schema using **relational algebra** operators. Also show the result of each query as it would apply to the database state of Figure 1.

6 pts per problem (4 pts for relational algebra query and 2 pts for resulting relation)

- 1) Retrieve the first and last names of employees that work in department 1 or department 4.
- 2) Retrieve the names of all departments with a location in 'Stafford'.
- 3) Retrieve the SSNs of all employees that work more than 10 hours per week on project number 1.
- 4) Retrieve the first and last names of employees in department 5 who work more than 10 hours per week on the 'ProductX' project.
- 5) Retrieve the first and last names of employees that are directly supervised by 'Franklin Wong'.
- 6) For each project, list the project name and the total hours per week (by all employees) spent on that project.
- 7) Retrieve the SSNs of employees who work on every project.
- 8) For each department, retrieve the department name, and the maximum salary of employees working in that department.

Submit your solution to Gradescope. You can submit a scanned copy of a "hand written" solution. Your solutions should have a maximum of two problems per page. You will get 2 pts for formatting and selecting the pages correctly in Gradescope.
